Ans to question
(2)

We want transmit 1000 character

(a) for synchronous

we have, $1000 \times 8 = 8000$ bits.

(b) for asynchronous

we have, $1000 \times 10 = 10000$ bits. where
only one stop bit and one start bit.

(c) for synchronous redundancy case is 0%
and for asynchronous where we send more
2000 bits than synchronous so here the redun-
dancy rate is 25%.
